To continue, your device will need to use Location Accuracy

The following settings should be on:

Location Accuracy, which

provides more accurate location for apps and services. To do this, Google periodically processes information about device

sensors and wireless signals from your device to crowdsource

wireless signal locations. These are used without identifying you

to improve location accuracy and location-based services and to

Turn on

improve, provide and maintain Google's services based on Google's and third parties' legitimate interests to serve

users' needs.

No, thanks
